

INDOOR FERN

Care Guide

Provide bright, indirect / filtered light if possible. North windows are great! Avoid direct light.

Provide well-drained soil and keep moist but not soggy and poorly drained.

Ferns LOVE humidity. You can mist them a few times a week or provide humidity with a pebble tray, a humidifier, or keep in a bathroom.

Indoor ferns come in all shapes and sizes but care for most of these are the same. Exceptions are ferns such as Staghorns.
