

## BROMELIAD “NEOREGELIA” CARE

### LIGHT

Bright but indirect light is best or direct morning light through a window. Avoid burning direct after light through windows.

*Bromeliaceae Neoregelia*

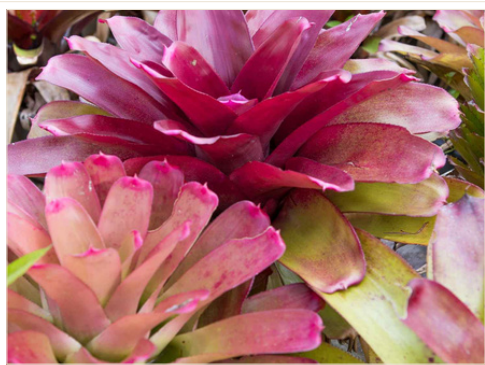

### WATER

Allow the potting media to dry before watering but keep the center cup of the plant filled with about 1/4 water.

### SOIL & FERTILIZER

Plant in a light, airy mix that drains well. Orchid potting mix can be a good choice.

### TIPS

 **PET & KID SAFE!** 

Use rainwater or filtered water to avoid mineral build-up. Mature bromeliads typically do not need to be re-potted but small plant “pup” babies growing off of them can be repotted into small pots.
